Browser Forensic Tool Crack+ Activator [Win/Mac]

Browser Forensic Tool is a lightweight software application whose purpose is to help you scan your web history for multiple web browsers, such as Google Chrome, Mozilla Firefox, Internet Explorer, Opera, Comodo Dragon, and others. Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to perform search operations in the web history on the breeze, without having to go through installation steps. Browser Forensic Tool sports a clean and intuitive layout that allows you to carry out most operations with just a few clicks. The utility gives you the possibility to create multiple searching profiles and add keywords for each one. The search process is based on the user-defined keywords, and the results are revealed in the primary panel. It provides details about the identified web browsers, titles, and URLs. What's more, you are allowed to open the selected link via the detected current browser, copy the title or URL to the Clipboard, export data to CSV file format, remove duplicate entries, as well as clear the entire list with just one click. Since it doesn't require much computer knowledge to set up the dedicated parameters, even rookies can master the entire process with just a few clicks. During our testing we have noticed that Browser Forensic Tool carries out a task quickly. As it would be expected from such a small utility, it remains light on system resources, so it doesn't burden the overall performance of the computer, nor interfere with other programs' functionality. To sum things up, Browser Forensic Tool offers a simple yet efficient software solution for helping you scan your web history based on user-defined words. A virus-free web crawler that is able to grab the history of the sites that you visit every time. - - - - - Browser History is a virus-free web crawler that is able to grab the history of the sites that you visit every time. - - - - - b7e8df5c8

Browser Forensic Tool With Key Free

More Details at: Description: System Monitor 4 is a handy and reliable utility that can monitor running processes, memory usage, and other system information. It allows you to check the application, browser, and browser history, read RSS feeds, and control certain processes by right-clicking on their name in the Start menu. System Monitor 4 can also read and write to an XML file, can detect existing network services, and supports a variety of logging methods. Key Features: * Control Internet Explorer, Google Chrome, Mozilla Firefox, Opera, and many other browsers; * View running processes, open and closed files, and internet web history; * Read RSS feeds with RSS-Reader; * List installed software and get their details; * Detect and hide running network services; * Gather information about the system, including CPU, RAM, HDD, and disk usage, and System Tray information; * Log memory usage, CPU utilization, updates, and RAM usage to an XML file; * Log keystrokes, including passwords entered into apps; * Create and edit registry keys; * Control and monitor all running processes. System Monitor 4 can track and manage RSS feeds, which are often used to get information in a short time. And now it is possible to read and manage these feeds automatically by right-clicking their names. With RSS Reader, you can save RSS feeds in your computer directly, and then view information periodically with just a click. System Monitor 4 can detect and control running network services (e.g. SkyDrive) for you, so that you can use them without ever having to go to the Control panel. And it is possible to show and hide network services, including Wi-Fi, PPP, HTTP, Telnet, SSH, UPnP, VNC, Bonjour, and Apple Game Center. System Monitor 4 logs all keystrokes, including passwords entered into apps. It allows you to view all that is typed in Windows, at any time, as plain text. System Monitor 4 allows you to read and write to an XML file, and it can also gather system information and display it in a simple, easy-to-read tree structure.
