This may seem odd, but the point of the Booster Pack is to allow you to customize your own Busou Shinki. If you have the mk2 game already, you can open this up in a new game file to add the content you want. [Economic burden of gastroesophageal reflux disease in Guangdong Province, China]. To estimate the economic burden of gastroesophageal reflux disease (GERD) in Guangdong province, China, and explore its correlation with GERD-related health care and pharmaceutical expenditures. Methods A total of 5000 respondents aged over 18 years were randomly selected from 33 counties in the 20 administrative districts in Guangdong province. Questionnaires were administered by trained interviewers to collect respondents' information regarding their health status, demographic characteristics, health care- and pharmaceutical-related expenditures, and individual

expenditure. Results As shown in Table 1, the mean (95% confidence interval [CI]) total direct health care- and pharmaceutical-related expenditures and the mean (95% CI) individual spending for GERD patients in Guangdong province were 37.9 (34.9-41.0) and 166.8 (150.6-181.1) Yuan, respectively. The percentage of households reporting a total of 0 and over 10 000 Yuan GERD-related costs were 7.4% (95% CI: 4.7-10.1) and 36.5% (95% CI: 26.3-46.7), respectively. The percentage of households reporting total direct and indirect GERD-related costs of over 10 000 Yuan was 33.2% (95% CI: 25.6-40.7). The corresponding percentage of households reporting total direct and indirect GERD-related costs of over 100 000 Yuan was 4.9% (95% CI: 1.6-8.2). The mean (95% CI) direct and indirect costs of GERD-related hospitalization were 10.2 (9.1-11.2) and 24.5 (22.1-26.9) Yuan per person, respectively. Direct health care and pharmaceutical-related expenditures correlated with GERD-related health care and pharmaceutical expenditures ($r = 0.773$ and 0.811 , respectively). Direct health care- and pharmaceutical-related expenditures for GERD patients in Guangdong province accounted for 13.0% of provincial health care- and pharmaceutical-related expenditures. The correlation between individual expenditures and GERD-related health 82157476af
